RGS RAINWATER SYSTEM

The role of the rainwater system is to collect precipitation from the roof and to discharge at either ground level, or to collect in external tanks or system sewerage, thus avoiding infiltrations into the building structure or uncontrolled spillage in the yard, garden, or other open space.

RGS Rainwater System is available in two sizes: 125/87 and 150/100. Gutters with a 125mm diameter are recommended for small and medium-sized homes, and gutters with a 150mm diameter can be used on industrial buildings with a considerable roof area.

SYSTEM BENEFITS

- **Made from Swedish SSAB steel**
- **Over 40 years of extensive outdoor testing**
- **Durability and reliability in operation**
- **Expertly manufactured**
- **Certified products**
- **Recommended for every roof**

Class	Thickness	Coating	Model	Guarantee
Coloured (SSAB Steel)	Minimum 0.57mm Zinc, 275g/m²	Green coat RWS Pro BT 35µm	Circular 125/87; 150/100	30 years corrosion; 15 years colour
Zinc	Minimum 0.57mm Zinc, 275g/m²	N/A	Circular 125/87; 150/100	10 years corrosion
